This report contains photos of masked and unmasked individuals in full compliance with all local COVID-19 safety regulations.

We are a global biotechnology company that invests in scientific innovation to create transformative medicines for people with serious diseases. We have multiple approved medicines that treat the underlying cause of cystic fibrosis (CF) — a rare, life-threatening genetic disease — and several ongoing clinical and research programs in CF. Beyond CF, we have a robust pipeline of investigational small molecule, cell and genetic therapies in other serious diseases where we have deep insight into causal human biology, including sickle cell disease, beta thalassemia, APOL1-mediated kidney disease, pain, type 1 diabetes, alpha-1 antitrypsin deficiency and Duchenne muscular dystrophy. We strongly commit to operating our business responsibly and disclosing our progress to stakeholders on an annual basis. This report shares our ongoing work in corporate responsibility (CR) with a focus on 2021 programs and updates.

Leadership Message
Reshma Kewalramani, M.D., Chief Executive Officer and President

2021 was an important year for Vertex and one that has positioned us well for the future as we continue to discover, develop and commercialize transformative medicines for people with serious diseases. Our differentiated strategy, combined with our special culture, has enabled us to make significant advances in multiple diseases across our pipeline, to broaden access to our cystic fibrosis (CF) medicines to new patient populations across the globe, and to continue to support our communities and each other.

Among our 2021 achievements, we:
• Increased access to our CF medicines for thousands more patients through reimbursement agreements and provided our medicines to nearly 2,000 patients through our compassionate use programs
• Completed enrollment for our clinical studies in severe sickle cell disease and transfusion-dependent beta thalassemia, progressed our next generation triple combination therapy for cystic fibrosis into pivotal development, showed proof-of-concept in the clinic for APOL1-mediated kidney disease, and saw early results from the first patients in our type 1 diabetes trial
• Advanced our industry-leading cell and genetic therapies programs and completed construction on the Jeffrey Leiden Center for Cell and Genetic Therapies in Boston to support this work
• Supported our growing organization by prioritizing inclusion, diversity and equity (ID&E), enhancing benefits and career growth and development opportunities, and supporting programs that build enduring pathways into biotechnology for individuals from underrepresented backgrounds
• Expanded efforts to support clinical trial diversity and ensure equity of opportunity for participation
• Continued to integrate sustainability best practices in our operations, staying on track to meet our global target to reduce absolute greenhouse gas (GHG) emissions by 20 percent by the end of 2023 over a 2018 baseline, despite business growth
• Supported education, innovation and health in the communities where we are located through more than $34M in charitable giving by Vertex and the Vertex Foundation

These achievements would not have been possible without our 3,900 employees, who represent a rich diversity of ethnicities, races, genders and gender identities, sexual orientations, backgrounds, experiences and beliefs. Year after year, Vertexians demonstrate their resilience and unwavering commitment to work together, innovate at our best and nurture our culture. In 2021, they continued to solve some of the most difficult challenges in science and medicine, which will enable us to bring transformative medicines to patients as quickly as we can.

As I look to the future, I couldn’t be more confident in the contributions Vertex will continue to make to support the patients we serve, our communities and each other. I’m proud to share our 2021 achievements in this report — the result of many Vertexians, patients and our communities coming together to deliver remarkable results.

Reshma Kewalramani, M.D.
Chief Executive Officer and President

About Vertex
We are a global biotechnology company that invests in scientific innovation to create transformative medicines for people with serious diseases. We have multiple approved medicines that treat the underlying cause of cystic fibrosis (CF) — a rare, life-threatening genetic disease — and several ongoing clinical and research programs in CF. Beyond CF, we have a robust pipeline of investigational small molecule, cell and genetic therapies in other serious diseases where we have deep insight into causal human biology, including sickle cell disease, beta thalassemia, APOL1-mediated kidney disease, pain, type 1 diabetes, alpha-1 antitrypsin deficiency and Duchenne muscular dystrophy. We strongly commit to operating our business responsibly and disclosing our progress to stakeholders on an annual basis. This report shares our ongoing work in corporate responsibility (CR) with a focus on 2021 programs and updates.
Our CR Priorities and 2021 Progress At-A-Glance

Foster an Ethical Culture That Embraces Innovation, Inclusion, Diversity and Equity
- 100% employees completed our annual code of conduct training
- 43% new hires are racial and ethnic minorities (U.S.)
- 41% leaders vice president and above are women
- 6 disease areas in the clinic

Carefully Manage Our Operations and Environmental Footprint
- 19.7% reduction in absolute greenhouse gas (GHG) emissions since 2018
- 100% renewable energy at our London and Oxford facilities
- 61% total waste diverted from landfill
- 84% square footage of our buildings are green certified

Make a Positive Impact in the Communities Where We Are Based
- $34M+ charitable giving by Vertex and the Vertex Foundation
- 1,450+ employees volunteered during annual Day of Service
- 1,971 nonprofit organizations supported through Employee Matching Gift Program
- 960+ hours engaging with students through our virtual STEAM education programs

Improve the Lives of People With Serious Diseases
- >70% business operating expenses invested in R&D (GAAP)
- $3.05B R&D investment (GAAP)
- 3 out of 5 employees work in R&D roles
- 6 disease areas in the clinic
- 30+ countries where our cystic fibrosis medicines are approved and reimbursed

At Vertex, we discover, develop and commercialize innovative medicines so that people with serious diseases can lead better lives. We invest heavily in scientific innovation and have several marketed medicines for the treatment of cystic fibrosis (CF), as well as a broad research and development (R&D) pipeline that targets additional disease areas where we have deep insight into the causal human biology, notably sickle cell disease, beta thalassemia, APOL1-mediated kidney disease, pain, type 1 diabetes, alpha-1 antitrypsin deficiency and Duchenne muscular dystrophy.

We fuel our success through serial innovation, an approach in which revenues and profits obtained from discovering and bringing one medicine to market are used to drive discovery and development of the next. Our 20+ year history in CF has informed this approach and exemplifies its principles.

Our strategy and business model are delivering a blueprint for serial innovation.

Our Research and Development Focus

We take a disease-first approach, addressing the human causal biology of serious diseases, with a focus on specialty markets. We invest in diseases where we can have a transformative impact for patients, not just an incremental benefit, and we work only on diseases where we have a deep understanding of the underlying cause in humans. By focusing on validated targets and creating predictive lab assays and targeting clinical biomarkers, we pursue therapeutic approaches that we believe are most likely to succeed. With our unique portfolio approach, we bring multiple compounds forward into the clinic and use clinical data to improve future drug development. This differentiated strategy and approach greatly increases our odds of success in discovering and developing potentially transformative medicines for patients.

We are modalistic agnostics; we build, acquire or partner to get the tools and technologies we need to treat a disease. Today our pipeline spans multiple modalities, even within the same disease area, including small molecules and cell and genetic therapies.

Our unique approach to building drug discovery programs maximizes our chances of creating therapies that may dramatically improve patients’ lives. Vertex is one of only a handful of companies that has internally discovered, developed and commercialized five innovative medicines.

Vertex invests heavily in innovation, with three out of five of our employees dedicated to R&D. We have four approved medicines to treat CF; the latest of which has the potential to treat the underlying cause of the disease in up to 90 percent of people with CF, and we continue to advance potential treatments to reach the last 10 percent.

We apply the same relentless drive that enabled our rapid progress in CF to a broader set of serious diseases. We have a robust pipeline of investigational therapeutics in sickle cell disease, beta thalassemia, type 1 diabetes, APOL1-mediated kidney disease, alpha-1 antitrypsin deficiency, pain and Duchenne muscular dystrophy. In 2021, we completed enrollment for our clinical studies in severe sickle cell disease and transfusion-dependent beta thalassemia, showed proof-of-concept in the clinic for APOL1-mediated kidney disease, alpha-1 antitrypsin deficiency, pain and Duchenne muscular dystrophy. We aremodistic agnostics; we build, acquire or partner to get the tools and technologies we need to treat a disease. In 2021, we completed enrollment for our clinical studies in severe sickle cell disease and transfusion-dependent beta thalassemia, showed proof-of-concept in the clinic for APOL1-mediated kidney disease, and saw early results from the first patients in our type 1 diabetes trial. We advanced our next generation triple combination therapy for CF into pivotal development and continue to progress proof-of-concept studies in acute pain.

We Are Advancing a Broad and Deep Pipeline Across Multiple Modalities

We’re advancing a broad and deep pipeline across multiple modalities in specialty markets. Our focus is on serious diseases where we can have a transformative impact for patients, not just an incremental benefit.

We view curing a disease as a continuous improvement process, and we invest in multiple modalities and disease areas within and across diseases to drive discovery and improve patients’ lives. We have multiple investigational compounds in clinical development, and we continue to expand our pipeline.

Vertex invests heavily in innovation, with three out of five of our employees dedicated to R&D. We have four approved medicines to treat CF; the latest of which has the potential to treat the underlying cause of the disease in up to 90 percent of people with CF, and we continue to advance potential treatments to reach the last 10 percent.

We are modalistic agnostics; we build, acquire or partner to get the tools and technologies we need to treat a disease. Today our pipeline spans multiple modalities, even within the same disease area, including small molecules and cell and genetic therapies.
Investing in Cell and Genetic Therapies (C&GT)

C&GT programs are essential to our R&D strategy. By investing in internal research and external partnerships and collaborations, we’ve identified and harnessed cutting-edge cell and genetic therapy technologies with the potential to address the underlying cause of multiple serious diseases in our pipeline. We have ongoing clinical trials in three diseases with gene editing or cell therapy technology as a result of these successful acquisitions and collaborations and are poised to enter the clinic with additional approaches in the next year.

To support this work, we completed construction on the Jeffrey Leiden Center for Cell and Genetic Therapies (Leiden Center) in Boston, a new state-of-the-art facility where our research teams will bring together the best biology, technologies and enhanced manufacturing capabilities to bring these cutting-edge transformative therapies to patients as safely and quickly as possible.

256,000 square foot state-of-the-art cell manufacturing center and research site in Boston

~ $3B invested to acquire product candidates and foundational enabling technology, and hire people with expertise in C&GT

400+ employees currently working on C&GT programs

Access to Medicines

Our aim is for Vertex medicines to be accessible to as many patients as possible around the world. Our medicines are currently approved and reimbursed in more than 30 countries globally, benefiting tens of thousands of patients on five continents, and we are seeking to expand sustainable access to Vertex CF medicines across countries, age groups and mutations.

Securing approval and access for patients with complex, chronic conditions like CF has many challenges. CF is a lifelong condition. Patient care and essential treatment must be maintained over the long term, and it is vital that people with CF can rely on, and be confident in, the continued supply of their medication.

By working collaboratively with various stakeholders in many countries, patients have access to our medicines through a range of routes, including fully reimbursed commercial access, individual named patient sales and compassionate use. In 2021 alone, we achieved over 25 new reimbursement agreements for our CF portfolio outside of the U.S., and, over the past two years, we more than tripled the number of people living with CF with access to a CF TR modifier therapy. The vast majority of these agreements include access to our triple combination therapy.

Patients across the U.S. have broad access to our medicines through private and public insurance, and through Vertex Guidance & Patient Support™ (GPS) we have assistance programs in place for eligible patients who need additional help, including providing free medicine to patients who do not have insurance and meet certain criteria. We’ve established compassionate use programs for our CF medicines in countries where there is a path for sustainable access to help those who are critically ill and serve as a bridge to approval and reimbursement. In 2021, Vertex provided medicines at no cost to nearly 2,000 patients globally through this program while many others transitioned to commercial access through new reimbursement agreements.

While significant progress has been made, we remain committed to work with all relevant stakeholders to make our medicines accessible to more people with CF around the world.

Engaging With Patient Communities

We are relentless in our pursuit to create transformative medicines for people with serious and life-threatening diseases. We recognize the importance of going beyond R&D to engage in advocacy, awareness and community support. It’s why we’re committed to engaging with patient organizations around the globe — to ensure our work is always centered on addressing the experiences of people with serious diseases, their caregivers and families.

We know that understanding the first-hand experiences of patient communities helps move science forward. We maintain an open dialogue with patients to develop insights that inform our mission. These interactions enable us to learn from patients and represent their voice within our work.

We continue to support CF programs and initiatives in the countries where we operate to educate health care professionals, strengthen R&D, raise disease awareness, and provide support to nonprofit organizations. One example of this is our Circle of Care program, a global competitive grant opportunity that awards up to $1M annually to innovative patient-centric programs that support people with CF to live fuller, more engaged lives.

For the disease areas in our pipeline, we are deeply committed to understanding the challenges and unmet needs of patients and patient communities. In 2021, we sponsored the Sickle Cell Community Consortium’s Warriors Convention and Caregivers Summit and became a founding member of the Sickle Cell Disease Partnership. In beta-thalassemia, we work closely with Cooky’s Anemia Foundation, the Thalassemia International Federation and other community partners to raise awareness and improve understanding of the disease.

We recognize that correctly diagnosing serious diseases and understanding potential treatments is critical to patient care. We are a leading sponsor of the American Kidney Fund’s Unknown Causes of Kidney Disease Project, which seeks to improve understanding of how undiagnosed and misdiagnosed causes of kidney disease directly impact patient care and outcomes. And, in type 1 diabetes, we are the inaugural sponsor of the JDRF Clinical Trial Connection Program, an initiative that provides educational resources and connects people living with type 1 diabetes with clinical trials that are actively recruiting participants.

Commitment to Patients

Through the Vertex Patient Commitment, we strive to:

- Put patients first and at the center of everything we do.
- Communicate clearly, accurately, honestly and transparently.
- Listen and learn from patients and caregivers about their experience living with a serious disease and apply these insights to our work.
- Respect the unique, independent voice of patient organizations and the individuals they represent.
- Support initiatives that help patients to live a full and engaged lifestyle.
- Encourage and provide opportunities for Vertex employees to engage with patient communities.

As we enter new therapeutic areas and engage with new and diverse patient populations, we recognize the powerful history of racism and the historical m malnourishment of communities of color that has contributed to systemic health inequities in many parts of the world. Removing systemic barriers to equitable health care must be prioritized to close the gaps in health care research, access, quality and patient outcomes for Black and other underrepresented communities.

Diversity, Equity and Inclusion in Clinical Trials

Clinical trials should be representative of all people living with a specific disease. Ensuring appropriate diversity in participant characteristics helps us to develop and deliver innovative medicines that can make a meaningful difference in the lives of all people living with that disease. We recognize that individuals may respond differently to a given treatment based on their age, biological sex, weight, race, ethnicity, geography and other factors. By providing equitable access to and including people from diverse backgrounds and locations, clinical trials can show if the treatments are safe and effective across patient populations.

Our aim is to sponsor inclusive clinical trials that represent the diversity of people living with the disease. We have an internal initiative to embed the patient voice into our clinical research areas. For diseases like sickle cell disease and APOL1-mediated kidney disease, which largely impact communities of color, we work with patient advocacy groups to create organizational changes in the way we engage with patients and develop clinical trial education and awareness materials that resonate with each unique patient community. In disease areas with broader prevalence, such as pain and diabetes, we seek insights from patients who come from varied demographic backgrounds, engage with partners to select trial sites in strategic areas, and offer recruitment materials in a variety of languages to provide an inclusive space for patients from historically underrepresented groups.

Ensuring equity of opportunity for participation in clinical trials is a core component of how we are maximizing our awareness, education and enrollment efforts. As we work to make our trials more convenient and accessible to all eligible patients, we will continue to ramp up decentralized clinical trial strategies, including virtual visits and home delivery of study medications.
Foster an Ethical Culture That Embraces Innovation, Inclusion, Diversity and Equity

We are the most innovative, make the best decisions for patients, and build the highest performing teams when our employees are supported and inclusion, diversity and equity (ID&E) are embedded throughout our organization. We recognize that achieving true excellence in ID&E requires investment and commitment at all levels.

People / ID&E

Equitable representation in our workforce and leadership teams, reflective of the diversity in our local areas and the patient communities we aim to serve, is critical to our success. We are committed to intentionally increasing diversity throughout our global organization and to providing greater transparency into our workforce demographics. In 2021, we published our most recent U.S. Federal Employer Information Report, known as EEO-1, and an ID&E Fact Sheet.

We signed the Business in the Community’s Race at Work charter in the U.K., which outlines five calls to action for organizations committed to improving equality of opportunity in the workplace. To further support our understanding of workplace demographics outside of the U.S., we launched the U.K. Equity in Metrics Initiative in 2021, a voluntary reporting program which will enable us to better understand the ethnic makeup of our U.K. workforce and create programs and policies that are inclusive of everyone who works at Vertex.

Increasing the Diversity of Our Talent Pipeline

We partner with numerous organizations to design and provide early career programs that help us nurture a diverse pipeline of talent and expand our outreach to communities that have been traditionally underrepresented in biotechnology careers. Key partners for this work include Bottom Line, the Boston Private Industry Council (PIC), Biomedical Science Careers Program, The Consortium, Thurgood Marshall College Fund, FourBlock and Hack Diversity, among others. In collaboration with Boston-based Year Up, we launched a first-of-its-kind biotechnology program that helps young people of color prepare for future careers in research, development and medicine. The first class of 10 young adults joined Vertex in July 2021 for a paid, six-month internship and of those, eight were hired as full-time employees in 2022. Other Vertex programs that build enduring pathways into biotechnology for individuals from underrepresented backgrounds include robust summer internships, co-op and industrial placements, and several flagship initiatives such as the Vertex Fellows, Physician Investigators, PharmD Fellowship and MBA Summer Associate programs.

We recently conducted a thorough analysis of job descriptions across the company and challenged ourselves to systematically re-evaluate the skills required for each role. By using a skills-based approach and removing preferred qualifications where appropriate, we’re making jobs accessible to anyone with the relevant skill sets. As a result, approximately 10 percent of our jobs no longer require a four-year degree.

ID&E Strategic Priorities

- **Inclusion** — Equip all Vertexians with the skills and resources to activate and live ID&E in their day-to-day interactions and decisions
- **Diversity** — Invest to address gaps in representation in our talent pipeline, with a focus on racial, ethnic, cultural and gender equity
- **Equity** — Embed inclusive and equitable practices throughout the employee experience

Workforce Diversity

People / ID&E
Creating an Inclusive Culture

We focus on increasing connectivity across Vertex, developing inclusive leadership skills in all our people, and fostering a culture in which everyone can do their best work because they feel, and are, asked for their perspectives and unique differences. Some of our ongoing workplace ID&E efforts include:

### Employee Resource Networks

We have four global employee resource networks (ERNs) that strengthen community and belonging within Vertex across functions and levels:

- **ERN (Employee Resource Networks)**
  - **BRAVE** Recognizes the veteran and first responder community and promotes the unique talents of these employees.
  - **VIBE** (Vertex Includes Everyone) Supports the empowerment and growth of our racially and ethnically diverse employees as leaders, building a diverse community based on trust and respect.
  - **PRIDE** (Vertex PRIDE) Supports, provides visibility for, and celebrates our LGBTQ+ employees and allies.
  - **IWILL (Inspiring Women in Leadership and Learning)** Seeks to strengthen Vertex’s efforts in attracting, retaining, developing, and enhancing the career satisfaction of women.

In 2021, members from VIBE and PRIDE expanded our ERN reverse mentoring program to our international region where executives participated in a program with our employees. We hosted three global ERNs and engaged 45 employees and leaders.

In 2021, we celebrated our fifth annual ID&E week, which focused on strengthening belonging through a combination of Vertex-led panels and external speakers.

#### LIVE ID&E Learning Portfolio

We recognize that in order to embed ID&E throughout our organization, employees need the space and resources to listen, learn and advance their fundamental understanding of what it means to LIVE ID&E at Vertex. We have a comprehensive learning portfolio to enable this work that focuses on three learning outcomes: establishing awareness and shared language, building empathy and strengthening belonging, and equitably developing talent.

#### Supporting Employees

We are relentless in our pursuit to create transformative medicines so people with serious diseases can lead better lives. Despite the ongoing challenges of COVID-19, we stayed true to the Vertex culture and values and continue to find ways to deliver for the patients who are counting on us.

As we look to the future, we are harnessing new ways of working and a new approach — “Flex @ Vertex” — which emphasizes flexibility while still enabling teams to thrive and deliver on our mission to serve patients. More than ever, we continue to recognize work is integrated into life, and that we need to think outside-traditional work arrangements. Our new way of working includes designations for on-site, hybrid and remote work. These designations were created through a comprehensive review of roles, by job family and type of work, to ensure a consistent and equitable approach.

To promote our employees’ continued well-being and development, we offer a variety of inclusive benefits and opportunities including:

- An equity compensation program for all regular, full-time employees in every country where we operate.
- An employee stock purchase program.
- A competitive 401(k) plan for U.S. employees.
- Up to 12 weeks of 100 percent paid Bonding Leave for all new parents in the U.S., regardless of caregiver status.
- A minimum of 18-26 weeks of 100 percent paid leave for U.S. employees who give birth.

To promote our employees to be more inclusive of all Vertexians, we continually update our work-life benefits and add new ones to be more inclusive of all Vertexians. In 2021, we introduced additional support for starting a family, building on existing fertility and family-building benefits, and expanded gender-affirming services.

For our employees, our satisfaction score is six points higher than our industry benchmark.
People / ID&E

An Ethical Culture for Employees and Suppliers

We are committed to operating our business in a responsible manner and expect all managers, employees, contractors and agents to be accountable for our culture of inclusion, transparency and integrity. Our Code of Conduct provides guidance on how to live these values, in areas such as human rights, protection of personal data, financial integrity, commitment to communities and environmental sustainability. We expect employees to comply with our Code of Conduct and all associated policies, procedures, guidelines and trainings. If we become aware of violations of law or Vertex policy, we investigate the matter and, where appropriate, take disciplinary action and implement corrective measures to prevent future violations. All employees are required to complete an annual Code of Conduct training to reaffirm our mutual commitment. We recognize that an effective compliance program must evolve and respond to the changing circumstances of the company and its environment. To this end, we are committed to continuous improvement based on regular reviews and assessments of the regulatory and business landscape.

As a member of the Pharmaceutical Supply Chain Initiative (PSCI), we support the PSCI Principles and work with our peers to achieve a vision of better social, health, safety and environmental outcomes. Our Supplier Code of Conduct outlines expectations that suppliers share our commitment to high ethical standards and behavior and defines the expectations they should have of us. Suppliers interested in providing goods and services to Vertex must agree to the Supplier Code of Conduct prior to starting a commercial relationship with the company.

Our Core Values:

An Ethical Culture for Employees and Suppliers

Vertex is proactive in increasing relationships with small and diverse suppliers, including minority, women, LGBTQ+, veteran and service-disabled, among others. These small and diverse business relationships strengthen and drive stability in communities and provide us with a more resilient, competitive and innovative supply chain. In 2021, 19.5 percent of our impactable spend in the U.S. was directed to small businesses, exceeding our 13.6 percent goal.

In 2021, Vertex’s Strategic Sourcing team conducted a supplier diversity roadshow for key functional areas to provide an overview of Vertex’s program, its benefits and how each team can advance our supplier diversity program. Since 2013, the Supplier Diversity program has grown its small business spend by more than 300 percent through various grassroots sourcing efforts, and we have plans in place to implement new goals and governance to enhance and mature our program in 2022.

Vertex participates in programs and invests in platforms that support small and diverse suppliers in our communities, such as:

- Diversity Alliance for Science (D4S)
- HELIX Supplier Diversity Forum
- Pacesetters
- Massachusetts LGBT Chamber of Commerce

Subscribing to a robust search platform that helps us identify small and diverse suppliers for upcoming projects

Operations

Sustainable Buildings

Managing our facilities responsibly presents the best opportunity for us to reduce our environmental footprint; so, when we build or retrofit buildings, we do it with a long-term view, utilizing green construction practices and incorporating state-of-the-art efficiencies. In 2021, Vertex completed construction on our new Leiden Center in Boston, which incorporates sustainability in all aspects of its construction and design. The building is intended to be U.S. Green Building Council LEED Platinum certified for Interior Design and Construction, V4, which, if received, would make it the first biotech manufacturing site to achieve this certification in Massachusetts.

Our Boston headquarters and San Diego facility are both LEED Gold certified. In 2021, our Dublin and Paris facilities earned SKA accreditation, and our Paris and Sydney offices received Fitwel ratings. SKA and Fitwel support sustainability and employee health and well-being throughout a building’s design, construction, and use.

As part of our Boston headquarters renovation effort that kicked off in 2021, we initiated efforts to minimize waste generated from construction in alignment with LEED standards. We anticipate that these renovations and our new flexible work arrangements will allow us to delay the need for additional space at our Boston headquarters by more than two years and reduce overall energy consumption per employee by 20 percent annually. We also donated office furniture and supplies that were no longer needed to local schools and nonprofits in Boston and in Oxford, U.K., resulting in more than 28 metric tons diverted from landfill.

Carefully Manage Our Operations and Environmental Footprint

We believe in operating responsibly, practicing environmental responsibility, considering climate change risks in our operations, and maintaining a safe workplace for our employees to positively contribute to healthy communities and economies. We limit our environmental impact by integrating sustainability best practices and adhering to operational excellence in our global operations.

Our business is growing, and we continue to take actions across our operations to minimize our environmental footprint and ensure the highest standard of workplace health and safety. We implement a global approach that focuses on reducing our greenhouse gas (GHG) emissions, conserving water, reducing waste, adopting green chemistry practices and promoting safety. Our Environmental, Health, Safety and Sustainability (EHSS) team, along with an internal, cross-functional Sustainability Committee, oversees and implements these efforts in accordance with Vertex’s commitment to sustainability, health, and safety.

The Leiden Center’s high-efficiency solar installation in the Boston Innovation District is set to be the largest rooftop array in the city.
We are committed to doing our part to mitigate climate change by managing our GHG emissions: setting ambitious targets, closely tracking our emissions, achieving reductions and reporting progress. Vertex has a global target to reduce absolute greenhouse gas (GHG) emissions by 20 percent by the end of 2023 over a 2018 baseline, which we consider aligned with the science-based targets initiative. This builds upon our previous achievement of reducing our absolute GHG emissions by 39 percent from 2015 to 2019. We continue to make progress toward our 2023 goal with a 25.7 percent reduction in absolute greenhouse gas emissions as of December 31, 2021. Using Enhanced Greenhouse Gas Protocol guidance, we determined that our total 2020 Scope 3 emissions were 206,332 MT CO2e. This calculation includes emissions categories that we consider most relevant to our business including purchased goods and services, capital goods, fuel and energy-related activities, upstream transportation and distribution, waste generated in operations, business travel, employee commuting and upstream leased assets. We plan to report Scope 3 on an annual basis starting in the 2022 reporting year.

Assessing Climate Risk

We conducted a climate risk assessment to identify, assess and quantify our climate-related risks and opportunities. Vertex is relatively exposed to transition risk, or the risk to our business associated with the transition toward a lower carbon economy, out to 2030. Our greatest climate risks can be attributed to the location of our facilities in Boston’s Innovation District; however, we believe that our existing flood mitigation processes including waterproofing, watertight doors, storm-resistant glass and flood barriers are sufficient to counteract wind and rain events across our facilities.

We are committed to doing our part to mitigate climate change by managing our GHG emissions: setting ambitious targets, closely tracking our emissions, achieving reductions and reporting progress. Vertex has a global target to reduce absolute greenhouse gas (GHG) emissions by 20 percent by the end of 2023 over a 2018 baseline, which we consider aligned with the science-based targets initiative. This builds upon our previous achievement of reducing our absolute GHG emissions by 39 percent from 2015 to 2019. We continue to make progress toward our 2023 goal with a 25.7 percent reduction in absolute greenhouse gas emissions as of December 31, 2021. Using Enhanced Greenhouse Gas Protocol guidance, we determined that our total 2020 Scope 3 emissions were 206,332 MT CO2e. This calculation includes emissions categories that we consider most relevant to our business including purchased goods and services, capital goods, fuel and energy-related activities, upstream transportation and distribution, waste generated in operations, business travel, employee commuting and upstream leased assets. We plan to report Scope 3 on an annual basis starting in the 2022 reporting year.

Emissions are a primary driver of our emissions, so energy management is a key aspect of our reduction strategy. The Loeben Center in Boston was designed to maximize energy efficiency and will feature a new solar array on an adjacent property that will supply up to 15 percent of the electricity demand for the facility. Our international headquarters in London and our Oxford, U.K., facility both source 100 percent-renewable energy, and our Leiden Gold certified San Diego facility is equipped with solar panels.

Managing Water and Minimizing Waste

Through lean and efficient manufacturing processes, we focus on reducing water usage and improving water usage year over year. We continue to assess our existing water mitigation processes including meeting or exceeding our internal targets, using lab water technology, improving lab water technologies and other markets.

We have several programs in place that help employees reduce their impact when they’re not in the office. In 2021, we provided $200 eco-vouchers to all employees in Belgium for use toward the purchase of ecological goods and services. Our London and Rome facilities provide green allowances for hybrid or on-site employees who commute via public transportation. In 2021, we introduced green allowances in Oxford, U.K.

In San Diego, we were recognized by Commute/SANDAG as a Diamond Awards recipient at the Platinum level for the fourth year in a row. The Commute Diamond Awards recognize employers in the region who have made strides to promote alternative commuting choices in the workplace as a means to reduce traffic and GHG emissions.

1 ERM CVS provided limited assurance of Scope 1 and Scope 2, as well as total emissions for 2020-2021. Assurance information for 2018-2019 can be found in the associated QCR reports. The 2021 ERM CVS Assurance Statement can be viewed at http://corporate.VERTEX.com/ERM.

2 ERM CVS provided limited assurance of scope for 2020. Assurance information for 2019-2018 can be found in the associated GRI reports.
Our Safety Culture

0.21% Total Recordable Incident Rate (TRIR)

0.05% Days Away, Restricted or Transferred (DART)

Veritas’ proactive safety culture focuses on accident prevention through diligence, shared accountability and thoughtful reflection. We strive to offer our employees, contractors and visitors a healthy and safe work environment and continually seek ways to improve these standards and incorporate industry best practices. In 2021, our recordable and lost time incident rates remained extremely low compared with industry benchmarks.

Veritas invests in education, awareness, monitoring and prevention programs to help recognize and mitigate safety hazards. As an example, our Occupational Health team conducts a thorough global occupational health team survey every year. Based on feedback and our on-site safety representatives received additional training on health and safety management.

Promoting Health and Safety in Our Workplace

Protecting employees, patients and communities while ensuring that our medicines get to the patients who need them remained a top priority in 2021. Our ongoing COVID-19 safety measures and actions are driven by science, data and thoughtful policy approaches, as well as empathy and compassion for those who are at particular risk from the virus. These measures and actions include:

- 24/7 COVID-19 response and support for employees through our global occupational health team.
- On-site COVID-19 and flu vaccination clinics at our major U.S. sites.
- Free testing for employees and immediate adult family members globally via at-home tests or reimbursement; weekly voluntary testing at all major sites in U.S.
- Continuous flexible work arrangements for employees
- Continued enhanced cleaning and sanitation protocols and adherence to mask wearing and physical distancing in accordance with local regulations.

Examples of Our Safety Program:

NEAR-MISS REPORTING
In our U.K. research facility, we have installed tabletops outside our laboratories so that employees can easily report near misses and raise any potential safety concerns before they turn into problems.

ENGINEERING CONTROLS
We incorporate engineering controls into the design of our laboratories and manufacturing centers wherever possible to protect our employees from hazards. As an example, our Leiden Center features error proofing for all compressed gases.

ERGONOMICS
Occupational health professionals are available to recommend practices that prevent injuries to scientists who spend long periods on their feet or work at multitiered stations. We provide comprehensive training and assessment tools to support employees who work at desks.

Research Ethics

We discover, develop and deliver innovative therapies for people with serious diseases. To fulfill our commitment to our patients, our employees and all our stakeholders, we conduct scientific research in accordance with three ethical principles outlined in Veritas’ Commitment to the Ethical Conduct of Scientific Research: Respect, Excellence and Integrity.

Given that Veritas continues to be at the forefront of research to bring new technologies and therapeutic modalities to patients, including stem-cell derived therapies and CRISPR/Cas9 gene editing, our ethical framework is also applied to research involving materials from human tissues, genetic research and animal research, as well as our guidelines for maintaining the scientific integrity of data.

Veritas’s proactive safety culture focuses on accident prevention through diligence, shared accountability and thoughtful reflection. We strive to offer our employees, contractors and visitors a healthy and safe work environment and continually seek ways to improve these standards and incorporate industry best practices. ERGONOMICS
Occupational health professionals are available to recommend practices that prevent injuries to scientists who spend long periods on their feet or work at multitiered stations. We provide comprehensive training and assessment tools to support employees who work at desks.
Clinical trials, and the participants who generously volunteer to share their time and experience, enable us to develop transformative medicines for patients with serious diseases. We are committed to protecting the rights and well-being of participants enrolled in our clinical trials. We invest in tools and technologies to seek a better understanding of the patient experience and use those insights to inform the design of all our trials.

We conduct scientifically rigorous clinical trials that comply with all applicable laws and regulations in countries where we intend to seek marketing authorization. Our trials integrate ethical and safety procedures in accordance with the highest standards including the International Conference on Harmonization (ICH) Good Clinical Practice guidelines. Each trial is approved by an Institutional Review Board (IRB) or Ethics Committee (EC) that includes medical, scientific and nonscientific members, whose responsibility is to protect the rights, welfare, safety and well-being of clinical trial participants. Once approved, clinical trial locations are monitored by a specific IRB or EC that is responsible for conducting ongoing reviews.

All clinical trial participants must give their informed consent before they are enrolled in a clinical trial. Subjects are provided an Informed Consent Form that explains the details of the trial, including its purpose, length of time, required procedures, alternative care options, personal data protections, key contacts and possible risks and benefits. Participation in a clinical trial is always voluntary and participants may withdraw at any time and for any reason. The principal investigator is required to inform clinical trial participants of any new developments that may affect or influence their decision to participate. The IRB/EC plays a role in overseeing the conduct of clinical trials to make sure this occurs.

Vertex’s audit program, which includes site visits by our Quality Assurance and regulatory teams, is designed to cover clinical trials conducted around the world. When conducting audits, we evaluate the quality and safety of our clinical trial locations, including investigation sites, to make sure this occurs. When we identify potential areas for improvement, we work with site investigators to ensure our quality and safety standards are maintained.

During 2021, we worked closely with our service providers to safeguard patient safety and accommodate pandemic restrictions. We adapted trials to remote models where possible, offering telehealth options and allowing patients to continue their dosing at home when deemed appropriate. Similarly, our audit program adapted to the pandemic restrictions by leveraging remote audits, where feasible, to ensure continued oversight.

We are committed to clinical trial transparency and comply with laws requiring registration and disclosure of clinical trial outcomes on public registries such as ClinicalTrials.gov and the EU Clinical Trials Register and release clinical documents in accordance with health authority regulations. Results are also published in peer-reviewed medical and scientific journals. All clinical trial participants must give their informed consent before they are entered into a trial. Subjects are provided an Informed Consent Form that explains the details of the trial, including its purpose, length of time, required procedures, alternative care options, personal data protections, key contacts and possible risks and benefits. Participation in a clinical trial is always voluntary and participants may withdraw at any time and for any reason. The principal investigator is required to inform clinical trial participants of any new developments that may affect or influence their decision to participate. The IRB/EC plays a role in overseeing clinical trials to make sure this occurs.

code of conduct

Operations

Clinical Trial Safety, Ethics and Oversight

Clinical trials align with pre-established criteria. Our service providers and clinical investigators are audited through our Good Clinical Practice (GCP) audit program to confirm that they meet our quality and safety standards and are compliant with applicable regulatory requirements and, where necessary, to identify meaningful corrective and preventive actions. Issues related to contracted services or GCP standards are managed through a formal escalation pathway.

Our trials integrate ethical and safety procedures in accordance with the highest standards including the International Conference on Harmonization (ICH) Good Clinical Practice guidelines. Each trial is approved by an Institutional Review Board (IRB) or Ethics Committee (EC) that includes medical, scientific and nonscientific members, whose responsibility is to protect the rights, welfare, safety and well-being of clinical trial participants. Once approved, clinical trial locations are monitored by a specific IRB or EC that is responsible for conducting ongoing reviews.

All clinical trial participants must give their informed consent before they are enrolled in a trial. Subjects are provided an Informed Consent Form that explains the details of the trial, including its purpose, length of time, required procedures, alternative care options, personal data protections, key contacts and possible risks and benefits. The principal investigator is required to inform clinical trial participants of any new developments that may affect or influence their decision to participate. The IRB/EC plays a role in overseeing clinical trials to make sure this occurs.

Counterfeit, falsified and diverted medicines are a serious risk to patient health and safety. Vertex’s Secure Supply Chain Council is a cross-functional team that leads our work to prevent, detect and respond to instances of product diversion, falsification and counterfeiting, and maintain the quality of our commercial products for the patients who rely on them. Some of the ways we do this include:

- Continuously monitoring markets and incorporating controls to protect our supply chain, starting with materials sourcing and continuing through manufacturing and distribution.
- Integrating security measures into the packaging of our medicines to help authenticate genuine Vertex product.
- Incorporating serialization, which is the process of adding a unique identifier to the final packaging that can be tracked through the supply chain.
- Continuously expanding our global product track and trace capability throughout the supply chain, from manufacturer to wholesaler or specialty pharmacy.
- Investigating instances of potential counterfeiting, falsification, theft and diversion, and partnering with law enforcement when warranted.
- Utilizing a defined detect notification process to alert health authorities, patients and business partners of potential risks associated with potentially counterfeit/falsified products.
- Educating our employees on the process for identifying and reporting product complaints through an annual training as outlined in our Code of Conduct.
- Engaging with external trade groups, alliances, organizations and agencies including: pharmaceutical security institute (PSI), transported asset protection association (TAPA), pharmaceutical cargo security coalition (PCSC), health information sharing and analysis center (HISAC), and health care distribution alliance (HDA).

Protecting Our Supply Chain

Operations

Safeguarding Data and Protecting Privacy

Protecting business, employee and patient information is a top priority at Vertex. We have implemented a zero-trust model and take actions to continually enhance our global security measures. To keep data safe and help Vertex continue to grow, we improved remote access capabilities, made document labeling processes easier and enhanced protections for personal information and intellectual property. We regularly update our websites to meet new and emerging privacy regulations, and all employees take annual cybersecurity training and are subject to randomized phishing testing. We engage with government and industry groups such as the Department of Homeland Security’s Cybersecurity & Infrastructure Security Agency (DHS CISA) and the Health Information Sharing and Analysis Center (HISAC), a global nonprofit providing health care stakeholders with a forum for sharing vital physical and cyber threat intelligence and best practices.
Community

Make a Positive Impact in the Communities Where We Are Based

We take seriously our responsibility to make a positive impact in the communities where we live and work. Through Vertex and the Vertex Foundation, we volunteer with and provide funding to collaborators who share our passion for backing the next generation of innovators, supporting patients and their families, and enabling solutions to community challenges to create a more just, inclusive and equitable society.

The Vertex Foundation is instrumental to our efforts. Established in 2017, it aims to improve the lives of people with serious diseases and contribute to the communities where Vertex is located through education, innovation and health.

$34M+ in charitable giving by Vertex and the Vertex Foundation in 2021

Ongoing Focus on STEAM

We are committed to inspiring and equipping underresourced students to become the next generation of STEM leaders. Our global STEAM education programs are designed to provide opportunity and show young people in our local communities just how impactful, rewarding and exciting a career in biotechnology can be, while enabling them to share their skills and expertise.

Our commitment comes to life through a series of globally aligned and locally implemented initiatives that center on creating space for learning, supporting equitable access to STEM education, and developing the next generation of STEM leaders. A key differentiator of Vertex’s programs is that high school students are compensated for their participation in internship and mentorship programs, helping to address educational inequities and enabling underserved students to participate.

We do this through a series of innovative projects and programs, which continued in a virtual environment in 2021.

School Partnerships and Teacher Support

• Through our Learning Labs in Boston, San Diego and Oxford, U.K., we bring classroom concepts to life and give students access to resources and technologies that are generally not available in schools. Our Learning Labs’ school partnerships prioritize engagement with students and schools that have limited opportunities to access hands-on STEAM experiences and exposure to the STEM industry.

• We support teacher professional development in Boston and San Diego. Through five sessions attended by 28 teachers in 2021, teachers learned about the future of biotechnology and current topics in science and technology such as CRISPR, data science, coding, ID&E and supporting teachers of color.

• Vertex hosted career panels and reading circles with students across multiple high schools and elementary schools in Boston, San Diego and Oxford, U.K., to celebrate heritage months, including Black History, Women’s History, Asian American and Pacific Islander Heritage and Pride.

Talent and Workforce Development

• We provide hands-on career experiences to local high school students through paid internship programs where students explore the business of biotechnology, strengthen STEAM skills and cultivate a lasting professional learning network. We expanded our program to hire 80 students in Boston, San Diego and Oxford, U.K., in 2021, each of whom were provided with laptops and at-home STEAM kits to enable participation virtually. In 2021, we also marked the 10th anniversary of our internship program in Boston.

1 The Bridge to STEM Careers Program and three Global Summer Internship Programs (Boston, Oxford and San Diego) were part of Vertex’s paid internship opportunities for local high school students to inspire and provide them with STEM career opportunities. As part of this work, all of Vertex’s paid internship opportunities used the Common Instrument Suite (CIS).

20,000+ hours spent by students in Learning Lab programming

29 schools engaged in Boston, San Diego and Oxford, U.K.

100% of students reported positive changes in their STEAM engagement as a result of taking part in our talent and workforce development programs.
From Field Trip to Vertex Employee

Vertex is committed to developing a broad pipeline of talent through engagement with communities that have been traditionally underrepresented in biotechnology careers. Our Learning Labs, paid internships and scholarship programs are a few of the ways we achieve this. Jamesha Senatus and Sayed Shah are two former participants in these programs who have been hired at Vertex full-time.

Jamesha Senatus
Global Meetings & Events Coordinator
Former high school and college intern

“I started my career at Vertex as a high school intern where I gained many skills that helped me during college. Vertex’s commitment to patients alongside its dedication to seeing young employees succeed inspired me to pursue a career here.”

Sayed Shah
Development Analyst & Software Engineer
2017 Vertex Science Leaders Scholarship recipient and former high school and college intern

“I have many mentors at Vertex who care about my growth and future. Every person that I meet is passionate about the work they’re doing, and I know that working here as a software engineer will have an impact on other people’s lives.”

Innovation is at the core of Vertex, and we are committed to supporting initiatives that enable innovative solutions to community challenges. By partnering with organizations utilizing innovative approaches, the Vertex Foundation aims to develop solutions that are more effective, efficient, sustainable or equitable than the status quo.

For example, through the Vertex Foundation, we partner with Equal Justice Works to provide fellowships to new public interest lawyers so they can receive training and support to implement effective projects and to build a strong foundation for their careers. In 2021, the Vertex Foundation supported two fellows whose projects focused on expanding access to justice for human trafficking survivors in California and launched a first-of-its-kind project focusing on advocacy and outreach to low-income Black, Indigenous and People of Color (BIPOC) and LGBTQ+ individuals in Boston.

Supporting Healthy Families

A child living with a serious illness impacts the whole family, so we have several initiatives in place to support quality of life for families with children living with serious diseases.

The Vertex Foundation Scholarship helps people with cystic fibrosis (CF) and their families pursue two-year, four-year or graduate degrees through a competitive scholarship program. In 2021, 88 students in the U.S. and Canada were awarded scholarships through this initiative.

We expanded our support of Ronald McDonald House Charities (RMHC) in 2021 to five new countries — Australia, Germany, Italy, Spain and Sweden — in addition to our partnerships in the U.S. and Ireland. In Australia, our support is being used to translate RMHC welcome materials and other educational assets into several languages, including Mandarin, Cantonese, Spanish, French and Arabic, to better serve the diverse populations served in the region.

The Vertex Foundation also continues to fund camps that provide holistic support for children with serious illness and their family members. In 2021, we began a new partnership with L’ENVOL in France to provide camps for seriously ill children and their siblings to strengthen fraternal ties and meet other children in similar circumstances. This initiative builds on our ongoing partnerships with Barnsteen in Ireland, The Painted Turtle in California, and Camp Sunshine in Maine.

We launched a new Bridge-to-STEM Careers Program which was attended by 36 high school students across Boston and San Diego. The program consisted of career exploration, STEM activities and enrichment experiences to support students’ growth as young STEM professionals.

We create connections between students and Vertex employees in partnership with our four Global Employee Resource Networks (ERNs). In 2021, 120 ERN members served as mentors to high school students.

Youth Engagement in Local Communities

• We develop and leverage strategic partnerships to maximize impact in our communities. One example is the Vertex Foundation’s ongoing partnership with the Boston Children’s Museum, which will expand hands-on STEM enrichment experiences for approximately 400 students and provide collaborative professional development sessions for teachers at Boston public elementary schools in 2022. Through the Vertex Foundation, we also partner with STEM Learning to offer a series of STEM-themed camps for underserved students near our site in Oxford, U.K.

• Through the Vertex Science Leader’s Scholarship Program, we award Boston Public Schools high school seniors with fully funded four-year scholarships to pursue a STEM degree at any University of Massachusetts campus. Going beyond covering the cost of school, scholarship recipients are given access to college internships and mentoring from Vertex scientists and our partners at Bottom Line, a nonprofit organization that helps low-income and first-generation college students succeed.

• The Vertex Foundation Scholarship helps people with cystic fibrosis (CF) and their families pursue two-year, four-year or graduate degrees through a competitive scholarship program. In 2021, 88 students in the U.S. and Canada were awarded scholarships through this initiative.

• The Vertex Foundation also continues to fund camps that provide holistic support for children with serious illness and their family members. In 2021, we began a new partnership with L’ENVOL in France to provide camps for seriously ill children and their siblings to strengthen fraternal ties and meet other children in similar circumstances. In Australia, our support is being used to translate RMHC welcome materials and other educational assets into several languages, including Mandarin, Cantonese, Spanish, French and Arabic, to better serve the diverse populations served in the region.

Community
Advancing Inclusion, Diversity and Equity in Our Communities

Our commitment to inclusion, diversity and equity (ID&E) is longstanding and encompasses our workplaces as well as our communities. Vertex and the Vertex Foundation fund projects and organizations with a strong commitment to ID&E, and we seek to promote these values through all of our focus areas.

Through Vertex and the Vertex Foundation, our support of ID&E in the community includes:

- Helping to establish the Boston University Center for Antiracist Research as the first corporate funder. The Center is researching and developing new ways to understand, explain and solve problems of racial inequity and injustice.
- Supporting the New Commonwealth Racial Equity and Social Justice Fund, a coalition of Black and Brown executives in Massachusetts who work together to leverage their individual and collective power to eliminate systemic racism and racial inequity throughout the state.
- Offering employees a special 2:1 match on donations made to 17 organizations supporting racial and social justice during the Foundation’s annual matching gift campaign in June 2021.

Engaging Employees in Community Support

Vertexians contribute their time and talents through our two signature employee engagement programs: the Vertex Foundation Matching Gift Program and our employee volunteer program, Vertex Volunteers. When our employees take on approved service or pro-bono commitments, it’s fully supported and treated as any other work-related task. For example, Vertex employees who currently serve on nonprofit boards receive a nonprofit board service training, ongoing virtual resources and an annual donation from the Vertex Foundation to support the nonprofit. Combined, more than 58 percent of all Vertexians gave back to their communities through the Vertex Foundation Matching Gift Program and Vertex Volunteers in 2021.

Day of Service

Our annual global Day of Service gives employees the chance to lend their time and expertise to nonprofit organizations during a paid day of volunteering. In 2021, we continued to offer virtual volunteer activities and expanded in-person events in select markets in accordance with COVID-19 guidelines. More than 1,450 employees from 24 Vertex offices participated in the Day of Service, making the event our largest and most impactful to date.

Since 2016, our Legal and Office of Business Integrity & Ethics team has provided free legal resources to individuals in need through partnerships with Equal Justice Works, the Political Asylum/Immigration Representation (PAIR) Project, Project Citizenship, Transgender ID Project and others. In total, the team volunteered 415 hours and served 37 clients in 2021.

2 In 2021, Vertex began reporting safety Total Recordable Incident Rate (TRIR) per 200,000 hours worked. Our 2020 and 2019 data has been adjusted from a percentage to the rate per 200,000 hours worked for consistency.
3 In 2021, Vertex began reporting Days Away, Restricted or Transferred (DART) per 200,000 hours worked. In 2020 and 2019, we reported Lost Time Incident Rate (LTIR), which is days lost per 200,000 hours worked. Our 2020 and 2019 data has been adjusted from LTIR to DART for consistency.
4 Includes hazardous and nonhazardous waste diverted from landfill via recycling, composting, fuel blending, and incineration for repurposing or energy recovery.

We are monitoring key corporate responsibility metrics across the business. The table below tracks 15 metrics in alignment with the Sustainability Accounting Standards Board (SASB) reporting framework. These include metrics that are discussed in this 2021 Corporate Responsibility Report, our Code of Conduct, Annual Report (Form 10-K) and corporate website.

**Special Note Regarding Forward-Looking Statements**

This Corporate Responsibility Report includes forward-looking statements about, among other things, our performance on environmental, social and governance topics, including goals and targets, company strategies and financial guidance. All forward-looking statements are based on our current expectations and involve inherent risks and uncertainties, including but not limited to those described under the heading "Risk Factors" in our Annual Report on Form 10-K and quarterly reports on Form 10-Q. Actual results may differ materially from those projected in forward-looking statements due to a wide range of factors. Readers are urged to carefully review and consider the various disclosures we make in our SEC filings and the information we post on our website at www.vrtx.com. You should not place undue reliance on these statements. Vertex disclaims any obligation to update the information contained in this press release as new information becomes available.
